Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: (Page 3, Line 21; Page 4, Line 2) "two upright blocks 5"" should be changed to --two upright blocks 6"-- in order to be consistent with the reference character shown in FIGS. 6 and 7 of the drawings.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Fox et al. (US-2,680,196).

Applicant's admitted prior art shows a canopy connector (2) and two connecting plates (1), the canopy connector having two chambers (21), wherein each of the chambers receiving an end portion of the corresponding connecting plate and a rivet (3) pivotally fastens the connecting plate to the canopy connector. Applicant's prior art lacks two blocks used to block the end portion of the connecting plate. Fox et al. shows a canopy connector (44) having a block (30) can may be viewed as a slant bottom block or an upright block given it is in a slanted position from the horizontal, used to block the connecting plate from

pivoting past a certain predetermined angle when the connecting plate and canopy connector are connected in a slantwise manner such as that shown in FIG.1. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Applicant's prior art to include a block of some sort that provides a slant, as suggested by Fox et al., in order to stop the connecting plates from pivoting past a certain predetermined angle so the canopy connector would provide a stable connection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danielle Jackson whose telephone number is (571) 272-2268. The examiner can normally be reached on Monday through Friday 8:30am - 5pm.
